

**We're Computer Service Centre.**  
An innovative, future-focused IT company.

---

*Client case study*

**Spire Solicitors**

We helped three successful firms of solicitors become one of the largest legal firms in the region.

# Spire Solicitors

## The client

Spire Solicitors LLP offer a comprehensive range of legal advice to businesses and individuals throughout Norfolk.

## The requirement

Spire Solicitors was formed through the merger of three leading Norfolk law firms: GHP, HVA and Overburys.

All three companies had their own IT infrastructure in place, but needed to work as one on a single platform going forward.

## The solution

Having consolidated technical and licensing information from the three companies' eight sites, we devised a way to bring all 140 staff together under one umbrella.

We used Hyper V virtualisation technology on a physical infrastructure to create an onsite failover cluster. This means that even if a server physically failed, all Spire staff could continue working and maintain the service levels that clients expect.

Now, approved Spire staff can access company data held securely on central servers wherever they are. Branch staff can work at any office in the Spire network, ensuring continuity even if a branch is inaccessible.

Our robust dual-location StoreIT system backs everything up automatically, ensuring essential data is always available, even if disaster strikes.

During the transition to the new system, our engineers stayed on site to offer support and reassurance to users.

Now, we're in the midst of the next stage in the evolution of Spire's staff services, to ensure maximum uptime and service delivery for years to come.

*‘Computer Service Centre took away the headache of integrating our separate IT systems. The solution they delivered offers all the convenience, security and accessibility we need. We’re looking forward to continue working with them in the future.’*
